

09-September-2016

“Stereo i Kolorowo – Underground” on-line magazine just published a fantastic review of TAGA Harmony HTR-1000CD Hybrid FM/DAB+ Bluetooth CD-Receiver.

"I RECOMMEND IT WITH PLEASURE AND CONVICTION"

Listening impressions

“...a listener receives sound lively and crisp, powerful in its dimension, cultural in perception, put together in the space. The sound is slightly sweet (thanks to the vacuum tubes in the preamplifier stage), and little heated to a temperature close to 37 degrees Celsius (which is a tad higher than the physiological human 36.6 deg. C.). However as the whole the sound is linear and juicy and is characterized by both high dynamics and energy. The trebles are smooth and silky, pleasantly sweetened, the mids are surprisingly dense and varied (as for the Taga Harmony price level), while the low frequencies are nicely extended and strong...The whole sound is revealed as effective, melodic and substantial, but you do not feel exaggeration or cheapness in it...”

Conclusion

“If someone is looking for a small-sized budget receiver with huge capabilities and the fetching sound with its culture and melodiousness, it does not have to look far. Taga Harmony HTR-1000CD will provide all these with a vengeance. Because this baby does not only offer multi-functionality (CD player, vacuum tube preamplifier, Bluetooth receiver, analog and digital DAB+ tuner, USB input for external memory, two analog inputs ...) but also a full-sized and palpable sound with pure hi-fi chic...I recommend it with pleasure and conviction.”
